WEATHER OF CONCERN

Weather of Concern

- Significant marine push will keep higher relative humidities in firefighting areas.
- San Joaquin Valley Air Pollution Control District has issued an Air Quality Alert due to smoke impacts from surrounding fires, which will last until the fires are extinguished.
- Dry weather, with near normal low temperatures and slightly below normal high temperatures, can be expected throughout the Central California interior during the next several days.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Northern portions of Lake County will see cloudy skies, however trace reports of precipitation along the north coast and in the Umpqua Basin was expected due to most of the moisture is well east of the forecast area. There is only enough moisture in the area for cloud cover south of the Umpqua Divide. The marine push is still creating higher relative humidities which will be beneficial for firefighting areas. Cloud cover will give way to sunny skies later this morning as the upper level trough moves to the east. The thermal trough will strengthen along the coast creating an easterly flow through Tuesday. Northeast winds will strengthen this afternoon along the Coast Range.

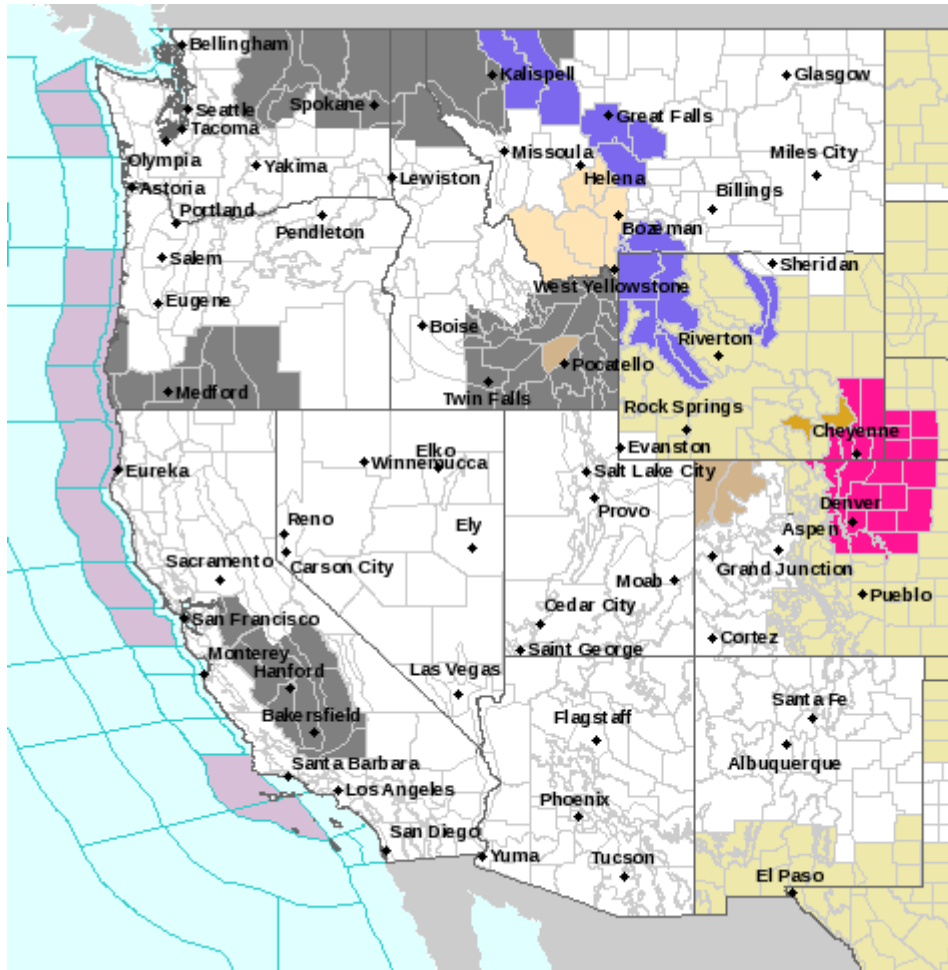

Cooler than normal temperatures are expected through midweek as a trough of low pressure remains over California. A warming trend is possible later in the week as a ridge of high pressure temporarily builds over the area. Dry weather is expected through the week and areas of smoke and haze will continue.

SOUTHERN CALIFORNIA

Temperatures will be near to slightly below normal as onshore breezes continue. Overnight and morning low clouds will continue through midweek. The later half of the week will see increased temperatures as the offshore flow moves in. Westerly flow will bring mainly near normal temperatures through Thursday. Low clouds and fog in the coastal and valley areas during the nights and mornings will develop. As the marine layer is reduced, Friday will see warmer temperatures. The mountains and deserts will see gusty winds in the afternoons and evenings as onshore flow persists. There are some hints at moisture returning to the region by Labor Day Weekend but could change as the week progresses.
